

Project Proposal: KOTHA- A room finder

Background :

Being an outsider from Kathmandu , it's a great challenge to search room in rent . This project can solve the problem related in searching rooms for rent in main cities like Kathmandu ,Biratnagar ,Pokhara ,Hetauda ,Chitwan etc.

Objectives :

- To search rooms without physically being on that location .
- To create advertisement platform for house owner.

Scope :

At end of this project a simple prototype will be created to help non residential people living in Kathmandu to find the room and house owner to advertise their empty room when project will be deployed online .

Timeframe :

Phases	Description of Work	Start and End Dates
Phase One	Basic Design of the project	Nov 15,16
Phase Two	Coding and Implementation	Nov-17 to Nov-30
Phase Three	Testing ,Maintenance and Updates	Up to December 10

Project Contributor :

Aman Maharjan	Front End Developer
Arjun Gautam	Design ,Presentation ,Manager
Prashant Sharma Dhungana	Full Stack Developer
Upendra Adhikari	Back End Developer ,Database Designer

Monitoring and Evaluation :

As described in timeframe of the project will be observed by manager on daily basis to know the progress of the project and there is more time allocated to phase Three, so for implementation phase time could be extended if Phase Two doesn't go as planned .

Tools :

Front end -HTML/CSS ,Bootstrap

Back end -PHP ,Code igniter framework

Server - localhost (Apache ,Mysql)
